# Working with Your Workspace

Quick note before we continue.

In the remainder of this lesson Brandy will walk you through how to code your own simple private blockchain. Accompanied with each video walk-through is an in-classroom workspace where you code along.
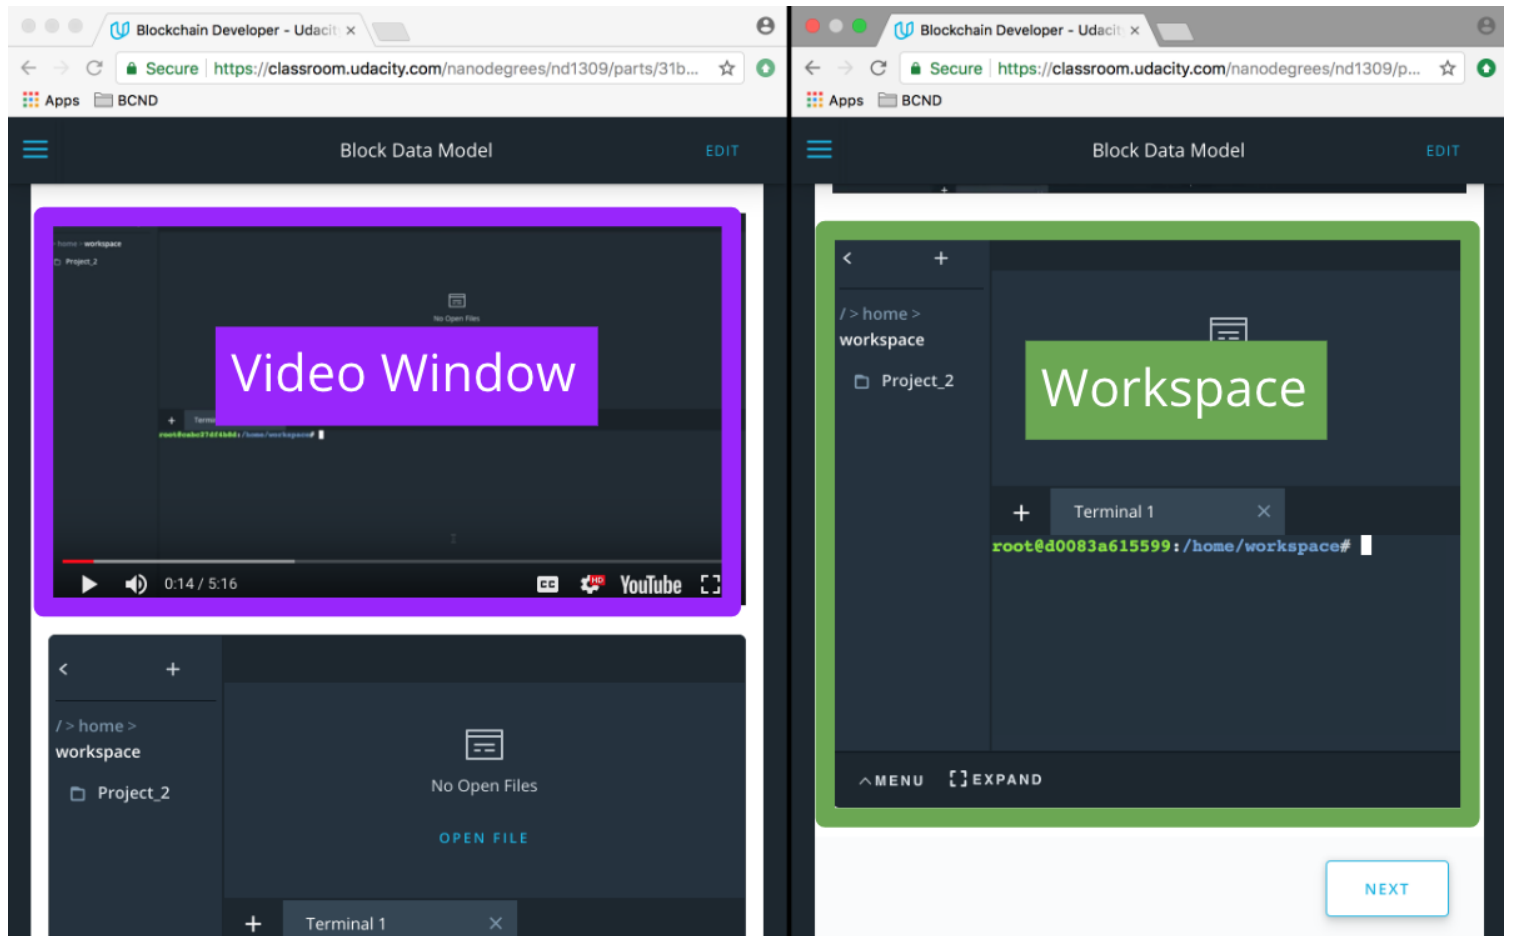

Setup Suggestion

Some students have found it helpful to have the lesson concept opened in two windows so that they can watch the video and code side-by-side.

First, collapse the table of contents:

Then, view the code walk-through and workspace side-by-side:

With that covered, have fun coding your first private blockchain!

Unable to Access Your Workspace?

If you are unable to access your Workspace in the Classroom it could be because you have "3rd Party Cookies" disabled in your browser. Workspaces need to set a "3rd party cookie" to enable access.

Check out this Workspace troubleshooting FAQ for information on how to enable 3rd party cookies for your browser.
